CLARESHOLM LOCAL NEWS

Mr. Farmer, join the Wheat Pool today. The Local Committee can be obtained from J. W. Hallatt.

"Barbara Frietchie," with Florence Vidor and Edmund Lowe, at the Rex theater on Friday and Saturday nights this week. This picture is based on the Clyde Fitch play.

Donald Long, 13 year old son of Mr. and Mrs. W. L. Long died on September 18 of spinal fever. The funeral took place on the 16th, interment being in Claresholm cemetery.

Robbers broke into O. L. Taylor's store at Carmagich on Tuesday night, took off their old clothes and departed in new clothes from the store's stock. They also stole the till.

Hon. Charles Stewart, Minister of the Interior, will address a public meeting in the interest of T. C. Milnes, Liberal candidate for the Macleod constituency, at the Rex theater, Claresholm, on Saturday afternoon, October 10, at 2:30 o'clock. Come and hear the campaign issues ably presented.

A public meeting in the interests of the Progressive movement will be held in the I.O.O.F. Hall, Claresholm, on Thursday night, October 8, at 8 o'clock. Hon. G. G. Crate, Progressive candidate for the Macleod constituency. Every body welcome.

The big storm has further delayed threshing in this part of the province. With favorable weather, it will probably be all over in two weeks before the work can be resumed. The crop in Claresholm district is about twenty-five per cent threshed, and has so far averaged better than was expected before threshing.

Report comes from Okotoks that the cow-poking gang came in the night, which delayed the work under the weight of heavy snow, on Tuesday afternoon, and is a total loss. No casualties resulted. The gang had been seen working in an effort to clear the snow off the road having been previously warned by the cracking of the timbers. The rink was valued at \$6,000.

Southern Alberta has during the past week experienced one of the severest snowstorms on record for this part of the country. Snow commenced falling last Friday and continued till Wednesday morning. The total snowfall was fully two feet, the greatest snowfall recorded at the School of Agriculture being 2.7 inches of water. The heavy wet snow did much damage to shade trees which were for the greater part still in foliage. Many trees were hardly broken by the weight of snow. Following Wednesday's clearing weather there was a big drop in temperature. The government thermometer at the School of Agriculture registered 40 above zero during Wednesday night.

Card of Thanks

Mr. and Mrs. W. L. Long wish to thank the school district and others for their kind flowers sent at the time of the funeral of Mr. Donald. Also for kindness and sympathy extended.

St. John's Church of England

Political Meeting

Hon. Charles Stewart, Minister of the Interior, with other speakers, will address a public meeting in the interest of T. C. Milnes, Federal Liberal candidate for the Macleod constituency, at the Rex theater, Claresholm, Saturday, October 10, at 2:30 p.m. Come and hear the issues of the campaign ably presented.

St. John's Harvest Thanksgiving Services Postponed

The special harvest thanksgiving services which were to have been held at St. John's church on October 4th have, owing to the inclement weather, been postponed to October 11th.

Guides and Scouts Give Farewell Service to Rev. W. C. Marsh

In full attendance of local Guides and Scouts ministered in the Parish Hall on Wednesday, the occasion being a joint meeting and a farewell social to the Rev. W. C. Marsh, district commissioner and scoutmaster of the Claresholm troupe.

After the opening ceremonies, Mr. Marsh invested Amy Mullin, Frieda Foster and Muriel Gordner as Tenderfoot Guides, and Jess Hall, Harold Atkinson, Joseph Bell and George Meares as Tenderfoot Scouts. Glen Moffatt and Duncan Mackenzie were then invested as patrol leaders of the Eagle and Wolf patrols, respectively. The commissioners, after presenting their officers' badges to Guide officers, Mrs. Cornelius and Miss Florence Atkinson. Addressing the troop to remember the three-fold nature of their badges, calling to remembrance the three-fold promise which each takes on being invested.

Following this part of the program the girls put on a very good tableau of a night camp, and sang two of their songs. A number of the boys had prepared novel songs which were done very well. Bertie Strange gave a humorous recitation. The Scouts then built an effective imitation camp fire in the center of the hall, while the girls stood at the side, while, accompanied by various solemn ceremonies a beautiful birthday cake was brought in and presented to the commissioner, of whom the girls had made a banner. The hall was beautifully decorated with the Guide and Scout emblems, and bore on the top the legend, "Be Prepared"; while each of the four sides bore the Scout's "Best Wishes to our Commissioners".

After refreshments had been served by the Guides, Mrs. Cornelius on their behalf, and Bud Reynolds, who was the Scout master, the Scouts, voiced the general regrets of the troop at the impending departure of Mr. Marsh, who in reply expressed the pride he had in the troop and wished them continued progress and success.

Flashlight pictures were then taken of the group and after a few songs the troop was dismissed, at what one of their songs describes as "The End of a Boy Scout Day."

The Cow Behind The Wagon

Indefatigable things are said and written these days about the present generation of young men and women. They are the sons and daughters of our fathers and mothers, their parents and grandmothers. But we must remember that the young men and women of this age are going to the dogs; that they lack the morals, the stamina, the strength of character of previous generations. Much the same kind of thing was said of mankind in general prior to the Great War, that the race had lost its virility, its power of endurance, its courage, its will to live, its energy and suffer. But the war demonstrated the fatuity of such statements.

None the less it is true that we have lost some of the things that made our fathers and mothers the salt of the earth. In recent years we have heard a good deal about hard times, but contrasted with what the early pioneers of this country had to endure, these years were those of plenty and ease.

The world progresses and it is only right and what should be encouraged that generations should not be called upon to undergo the trials and struggles of bygone days. But our modern civilization, with all its manifold conveniences, has caused the young men and women of today to expect too much for what they are willing to give; to assume the attitude that the world owes them a living and that they are going to collect it in the easiest and quickest possible way.

Our attention was recently directed to a little local item appearing in a United States newspaper which told of a young couple taking a deferred婚禮 (wedding) in which the bride and groom were to be married at a later date. It was stated that this couple, which has achieved a substantial success in the quarter century since marriage, had taken the original wedding trip in a hump-backed wagon with a cow behind the wagon, a gift of the bride's parents to the happy and hopeful couple.

The couple, residing in a quarter century ago started a popular chord in many newspapers, for within ten days after the article appeared not less than ten people dropped in at the newspaper office to tell the editor that they, too, had led a cow home behind the wagon after the wedding ceremony, and that their only wedding journey was from the home of the bride to the new home where the couple were to start housekeeping. The idea of this couple in view of the time when there was no good thing, many of the household able to buy cows today by the head, if they wanted to succeed. All of them gave credit for their success to their willingness to start with little and work hard for advancement.

The cow behind the wagon, says this newspaper, is symbolic of a generation of young men and women who face the world with little but with earnest ambition, willing to strive for what they want. Armed with youth, determination, health and strength, the world was theirs for the taking.

The pioneers of fifty, even twenty-five years ago, first required a home and then a home of a larger percentage of young people today is to own an automobile which may have a home and a car and will mortgage the future for present gratification.

Special or perhaps ignorant, that "it is right to succeed" is the motto of the day.

Despite all the talk of hard times, there are more advantages for the ordinary man and woman today than there have ever been before, but the men and women who wish to attain success must be prepared to pay the same price as our fathers and mothers and those before them paid—they must give it their best.

Word, hard work, and lots of it is one of the fine things life has to offer. There is nothing so satisfying as a well-earned success.

Start with a goal and work for success. The boy or girl who does not have to strive for themselves, but who have everything found for them by their parents, are not the really fortunate ones, as we are sometimes led to believe.

The young couple starting out in life where their parents left off miss the joy of achievement which their fathers and mothers experienced, and they never know that close and sympathetic comradeship which is realized by those who plan and work together shoulder to shoulder.

After Many Years

Danger From Yellow Races

Economic Rather Than Military

French and Belgian Troops Turn Ruler

The French and Belgian troops have turned over the Ruhr to the Germans after four years occupation, undertaken to compel Germany to pay reparations. There were no distances, no boundaries, no political or pleasure parties between French soldiers and their German sweethearts.

With the turn of the year the French security police were removed to take over the general policing.

The allied army marched out with bands playing.

Mrs. Dumb (who has just received her C. O. D. package from the butcher shop)—"Here, take these codfish right back. I ordered herring."

Sometimes people don't mind their own business because they haven't any mind.

Furs Bring Good Prices

Waxed and yellow brought good prices at the recent fur auctions at Winnipeg, add the demand for fur has still been very keen. The offering of silk fox was not up to the best quality. Beaver glands were in fair demand. About 75 bales of mink fur from the United States, were present.

Rapid Fire Gun Disappears Failed to Arrive at French Station and Cannot Be Found

Mystery surrounds the disappearance of a newly invented rapid fire gun built on lines of the Lewis gun, which while in France had been hoped for. The weapon disappeared from the railroad depot at Drave la Gâtardière, France, while in transit.

The gun was the invention of the engineer of a Swiss firm, and was being shipped to a proving ground for trial before a parliamentary commission prior to its adoption by the army. It failed to arrive and an inquiry was made as to why it was transported to Drave la Gâtardière, where the box in which it had been packed was found to have been opened. Parts of the gun were scattered about the depot. It is believed that the gun was either attempted to be exploded in the interest of some foreign power or whether the breaking open of the box was due to carelessness by railway employees.

Home Not Complete Without Nervilene

When your stomach is badly upset, when you feel weak and tired, when you feel like coming down with something, take it with come of 20 drops of Nervilene. Take it in sweetened water and you will feel better. Nervilene has been used for nearly half a century and is considered a necessity in the treatment of nervousness. It is especially useful in preventing small ills that constantly arise. Small ills that constantly arise.

Trying New Experiment

Boys in London Orphanage Educated As Individuals

In this day of specialization it is interesting to read of a novel experiment in education which is being tried, so that each child may be an individual in his own right. Boys in an orphanage in the English Orphanage of London. Each boy is treated as an individual, and a separate timetable is drawn up for him.

Class work is in this way abandoned. A boy is encouraged to specialize in whatever he likes best. Each boy is given a task to perform that will help him to earn his keep.

Flying into Matrimony

Swedish Couple Had Ceremony Performed On Board Aeroplane

A young Swedish couple were recently married while flying through the air in a biplane. The bride and groom, carrying a full complement of passengers, had risen to a height of 1,500 ft. after it was erected in the cabin, before which a Swedish electrician performed the marriage ceremony, while a steward and his wife as witnesses. A wedding breakfast was then served, and the health of the couple drunk in champagne by all the passengers.

The bride left the machine at Hamburg, but the couple continued their honeymoon trip to Amsterdam.

The needle of a Chinese compass points to the south.

Redeemable at Option of Government

On March 1, 1928

The Canadian Government has sold

to the Chase Securities Corporation and Blaikie and Company, Inc., New

York, \$70,000,000 of one-year four per

cent treasury notes due on March 1, 1929, the proceeds of which are to be used in connection with the retirement of one-year notes amounting to \$9,000,000 maturing September 15, 1925.

The balance of \$20,000,000, it is announced, will be paid out of cash on hand.

The notes are redeemable at the option of the government on March 1, 1928, and thereafter at par and interest, on 30 days public notice.

Entitled to First Prize

Build Giant Airplanes To Carry Passengers Across Atlantic Is Dream Of Aircraft Expert

The scheme to build giant airplanes capable of carrying across the Atlantic, with an estimated passenger list of one hundred and fifty passengers, besides the weight of engines, baggage, fuel and crew, is the grand dream of Mr. Jose Navarro, who, with experience as an expert aviator has been called to receive attention. That it comes within the compass of up-to-date aerial adventure is shown by the remarkable achievement of Captain Laroche, the French aviator who recently started alone more than forty-five hours and covered a distance of four thousand kilometers, enough to foreshadow the possibility of traversing by plane the ocean. Such a achievement, says the Minneapolis Journal, would be simply an extension of what is being done overland all the time, especially in view of the improvements of late years made in the speed, equipment and safety devices of aerial ships indicate that the day is not far distant when all the merits belonging to flying aircraft will be absorbed by the airplane. The plane is now fitted out and equipped with nine Napier Lion engines of four hundred and fifty horsepower each, should be navigated by Captain Laroche, Mr. Navarro is confident that they can.

An estimated wing-span of one hundred and eighty-five feet from tip to tip presents the vision of an awesome condor nesting its way through the air or proper steering factors being provided, the landing places is probably greater than getting into the air or proper steering factors all weather of these high altitudes. But such a flight, however, requires certain machines for assured control, and more devices for safety resort in case of any partial breakdown of the machinery. The giant planes are designed to carry enough food and water to last for weeks, so that the problem of finding and providing suitable landing places is probably greater than getting into the air or proper steering factors all weather of these high altitudes. But such a flight, however, requires certain machines for assured control, and more devices for safety resort in case of any partial breakdown of the machinery.

Aircraft structure and pilotage is still in its infancy. Considering that it is less than twenty years ago that the first man had made a flight in twenty-five seconds, it will be seen that an amazing advance has been already made, and had the French aviators referred to the present situation instead of circles they would have crossed the Atlantic without pause. Much still remains to be done by way of reducing the wing-spread consistent with the power of the engine and power and to this purpose aerial experts are addressing themselves with considerable success. Professor Low thinks that there is urgent need that some method of aerial or at least sailing should be adopted, so that aerial engines and propellers should be discovered. In time this may also be attained. Yet already the passengers who embark in a modern plane can be sure that they will travel in a comfortable and convenient manner in twenty-five seconds. It will be seen that an amazing advance has been already made, and had the French aviators referred to the present situation instead of circles they would have crossed the Atlantic without pause.

Cod Liver Oil For Chicks

Experiment Shows Beneficial Effects Of Feeding Oil To Young Chicks

An experiment conducted at the Industrial Hall, Sask., Donelson experimental farm, related to the feeding of chicks, has shown that oil is beneficial. Two lots of chicks, one of 48 and one of 19, were used in the experiment, at the end of which 90 per cent of the oil fed chicks were able to fly, while only 50 per cent of the chicks given the cod liver oil had greater growth and better development than the others. Again none of the chicks given the oil showed leg weakness, while 10 per cent of the others did. The oil was given as two per cent of the wet mass. At the conclusion of the experiment proper the chicks in both were given the oil and in every few days the superstitious bird manager reported that all signs of leg weakness had disappeared and the chicks had improved in vigor and general fitness.

English Firm Bids Yards Old

All records for longevity of a lamb are now beaten by the record set up by the giant lamb, weighing 1,000 lbs., which was born at Dachau, Germany. Ten large cow hides were required to supply the leather for the coat. The coat measures 5.9 feet and the shaft 16.4 feet. The lamb will remain at the town hall as a permanent exhibit.

A Plucky Canadian

Patrick Mongeon, a Canadian, joined and fought for three-quarters of an hour with a tiger before he was able to drive it off. He was brought between two cars on the Hudson-Manhattan tube. The two had to be separated. No amanuensis was available, and Mongeon remained cheerful during the operation.

Output Of Silver

The output of silver from Cobalt during July amounted to about 460,000 ozs., according to preliminary estimates, and at a rate of 100,000 ozs. \$200,000, or a rate of the about \$2,400,000 a year. Nipissing was the heaviest producer, followed in turn by'Brien Mining Corporation, McIntrye Darrall, La Rose and Monroe.

A ploughman, John King, of Cobalt, dug up a shield out of the ground in the spring, and King pointed out that parts of it from Canada for 1922 increased by 400 per cent.

Oats For Hay

Experiments Show That They Vary In Value

In his report for 1924, Dr. Shultz, Dominion chemist, gives some interesting details of an experiment with different varieties of oats when cut to 21 centimeters at the Cote-Rouge experimental station, Quebec.

The experiment was established to determine the value of the most important varieties of oats for hay, and over a number of years.

The crops were cut when the hay was in the late milk stage and the weights taken of the cured hay.

Banbury had 5,180 pounds dry to 100 cubic feet, 165,000 pounds and Gold Bar, 279.

The analysis shows that Banbury takes first place for high protein content, and Gold Bar, second, and the two latter fairly close behind.

The crops were all cut at the same stage, and it is assumed that the results are strictly comparable in the matter of digestibility and other factors.

The report gives the experiment in detail and is to be had free from the publications branch, Ottawa.

Of Interest To Swine Breeders

Report of Organization Meeting Held At Saskatoon

The department of agriculture at Ottawa has performed good service by holding a special meeting at the annual general meeting of the western swine committee at Saskatoon, Sask., on April 3 and 4 of the present year. This meeting, which was opened over by the provincial livestock commission, and attended by the chief live stock officials and swine breeders of the provinces, discussed took place on a variety of subjects of value to swine breeders.

Topics included: swine marking problems, the badness of estimating the ten per cent premium for selects, educational problems, the value of breeding and feeding problems relating to breeding and rearing, and, finally, the question of emigration of swine from the British Isles in 1924 to other parts of the empire was 115,600.

Too Much Fat One

A farmer found his car too heavy for the driveway to pull up a steep hill. A passing tourist came to the rescue, and helped to drag the vehicle. The farmer, full of gratitude, turned to the tourist and said: "I never could have done it with one ass."

A Sticker For Ma
Mother—You must learn to swear the f---, dear. F--- flies carry diseases.

Eh—The disease germs kill, ma---mother—Cer-tainly.
Eh—Then why don't they kill the f---?

Saman chief, after a visit to New Zealand, declared that they wished the British flag might remain in Samoa as long as the sun shines on the earth.

Basin Of All Prosperity

Says Agriculture the Most Solid Asset of Canada

Agriculture is the basis of all prosperity and no matter how serious is the crisis that affects farmers today, the result of financial depression is passing through a period of industrial prosperity never before seen. I have no hesitation in saying that there is no better time to invest in agriculture in this province," said Hon. J. E. Carton, minister of agriculture in the Quebec Government, at the luncheon of the Three Rivers exhibition.

He was particularly emphatic in his statement that agriculture was the most solid asset of

Canada and he denounced in energetic terms those who are discouraging the agricultural class.

Not Working To Capacity

Hens Not Doing Their Best Says Secretary of Canadian Poultry Council

Scientists have done a great deal in improving the egg-laying capacity of the English hen, it was pointed out by Dr. St. Francis Field, secretary of the Canadian Poultry Council, who stated, however, that the egg producers were not doing nearly as much work as they should in these days of progress.

Field said that in 1908 the average output per hen was 72 eggs per year. In 1924 it was 160, but ought to have been 120, which would have increased the wealth of the country considerably.

The analysis shows that Banbury takes first place for high protein content, and Gold Bar, second, and the two latter fairly close behind.

The crops were all cut at the same stage, and it is assumed that the results are strictly comparable in the matter of digestibility and other factors.

The report gives the experiment in detail and is to be had free from the publications branch, Ottawa.

Immigrants From Britain

10,000 Women Move From Britain to Canada In Year

According to official figures just made public yesterday, wives and honeymooners left the British Isles for British North America last year, and 6,000 went to Australia. More than 100,000 males migrated last year to Canada, Australia, and the United States, including 10,000 men in agriculture, 10,000 in mining, 10,000 in emigration, and 10,000 in the military.

Immigrants include women

marking problems, the badness of estimating the ten per cent premium for selects, educational problems, the value of breeding and feeding problems relating to breeding and rearing, and, finally, the question of emigration of swine from the British Isles in 1924 to other parts of the empire was 115,600.

The report gives the experiment in detail and is to be had free from the publications branch, Ottawa.

British Columbia Movie Censorship

Report of Committee on Censorship of Motion Pictures

Major H. R. Foster, a member since the board's inception in 1917 has been re-appointed. New members have been appointed. Major H. R. Foster is president of the Moving Picture Operators' Association.

Saman chief, after a visit to New Zealand, declared that they wished the British flag might remain in Samoa as long as the sun shines on the earth.

Ancient Escutcheon Back In Quebec

Hon. P. C. Larkin Brings Relic Returned By People Of Hastings, England

The arrival of the "Wise Star" herald lion, Megantic, which docked at Quebec recently, marked an important event in the history of that city, inasmuch as she carried among her possessions the ancient escutcheon of Hastings, England, which time ago had been captured by Flatley Wolfe Murray. Since that time this relic of the French regime has been in the possession of the city of Hastings, England, and for some time ago has been started on its restoration, which resulted in its return. The escutcheon measures four feet high and three feet wide, and is extremely carved and painted. Mr. Larkin has had a committee appointed to care for the shield and during its journey across the Atlantic it has been carefully stored in a room specially provided on the gates of Quebec in

The Advantages Of Egg Grading

Canada's System Is Claimed to be the Best in the World

Canada's system of egg grading is the best in the world. Thirty inspectors are now employed by the Dominion government department of agriculture, checking up on export and interprovincial shipments and on the wholesale and retail trade. Eggs are graded and consumption distributed into four grades on the basis of inferior quality, cleanness and weight. Our system of egg grading is claimed to be the best in the world and has been copied with slight modification by the United States. This standardization of eggs has established confidence between producer and consumer and between exporter and British importer and has resulted in greatly increased demand for the Canadian egg both on home and abroad. Our domestic consumption per capita has increased from 1676 dozen in 1926 to 2600 dozen in 1928.

At this rate we will reach

2700 dozen in 1930.

Losing Stamina And Fibre

Says Ease of Present Day Living Leads to Mental and Physical Degeneration

An eminent New York preacher recently charged that "the ease of present day living is responsible for physical and mental degeneration in man's kind"; and there is probably something in the diagnosis. To the extent that men and women are enabled to live without strenuous effort they are likely to lose in stamina and strength, but it is not clear that stage? Rev. O. T. Ellsworth says we have fathers were mighty and rugged, he argues because "they were up against forces that made for strength, that conditioned them to strength, that maintained them."

"We know almost nothing of such hardships, and our softness is absolutely tragic. The factors that made for character with our fathers are almost entirely gone. We have no more poevel, complaining, touch-me-nots; we have too many easy-jobs, flabby weaklings. They will never control or dominate the world, for to do so they must live in the darkness below the waves, were among the valuable finds.

Concerning the Hudson waterfall, Dr. Beebe said:

"It is a singular fact that

most people would be inclined to support it. But it is too sweeping. It has its application almost wholly to sons of the rich, and not even to all of them. In the plain words of Dr. Beebe, "what remains is established that the sea life there contains many hitherto unknown specimens."

He is a student of marine life,

and every detail is in support of it. But it is too sweeping. It has its application almost wholly to sons of the rich, and not even to all of them. In the plain words of Dr. Beebe, "what remains is established that the sea life there contains many hitherto unknown specimens."

Several bright, lighted fish were hauled up to the surface, indicating that a white light district exists at the bottom of the water. Fish which are thought to belong to hitherto undiscovered species were dredged from the bottom of the extract waterfall. Asked what was the most remarkable thing he had caught in the waterfalls, Dr. Beebe said: "We found many surprising things but the last one to be found always struck us as the most remarkable."

Fish That Is Good Marksman

Totie Shoots Water At Insects It Wishes to Devour

The totie, a fish that is known to travellers in the Islands of Malaya, is an expert marksman. It feeds upon insects. Swimming quietly along, it suddenly dashes out of the plants on the bank, and when it dashes out with many insects on its leaves or branches it will close its lips with water, takes accurate aim and shoots the insects into the water, where the insects are devoured by the insects. His aim is absolutely accurate and the water jet never misses its object. It kills the insects and washes them into the water so that the totie may devour them. The band, a large, fat fish, found on the coast of the Island of Alvinia, covers itself with mud, raises a small drag-like appendage on its lips and quietly awaits the inquisitiveness of smaller fish that mistakes the drag for insects. When a small fish comes near it assembles around the drag the band opens its large mouth and swallows them.

How Word "Tip" Originated

Derived From Ancient Word Meaning To Touch Lightly

Tip is derived from an ancient word which meant to touch lightly. So it conveyed the idea of secret and in that sense the word appears to have a private prefix which we call now a tip. Practically the same sense is understood in the "tip" of the raccoons, the essence of which is that it is at least supposed to be given secretly. The same explanation is, however, far different, and the story has been told of the hotel boy marked "To insure Promptness," the contents of which was rewards, shared out amongst the employees. The boy, while the story runs, in time, became shrewd to the initials, and finally to the new word of tip. Ingenious though that explanation is, the less interesting origin from the ancient word for touching lightly and secret. It is in all probability the correct one.

Believes Chinese Invented Locks

It is said the Chinese understand canal locks better than any other people. They are believed to have been the first to invent locks to raise vessels from one water level to another. Evidently canal locks were in operation in China before the time of Christ, the Christian era. In Europe there is doubt whether it was the Dutch or the Italians who first used locks on canals.

Taking No Chances

A placard in a hotel at Parthenon, Bavaria, reads: "Tourists under-taking to climb the higher mountain peaks are requested respectively to settle their accounts in advance."

Find Transparent Fish

Deep Sea Scientists Discover Marvels On Ocean's Bed

More and more of the remarkable finds of the Arcticus party of deep sea scientists are made public. Jules Verne becomes more and more of a tyro.

The Arcticus arrived at this port with Dr. William Beebe on the bridge, and straightway there were tales of surpassing marvels dredged up from the bed of the ocean.

Not the least of these was a fish which carried a transparent shell over its stomach. The spectator, looking through the plate, can see workings of all the vital organs of the single fish.

The Arcticus brought back interesting data about the 550-foot water fall of what was once the Hudson River 100 miles out of New York.

This waterfall has been known to scientists for a long time, but the exact cause for it to form in the darkness below the waves, were among the valuable finds.

Concerning the Hudson waterfall, Dr. Beebe said:

"The fish bed is plainly mark-

ed on the ocean bottom. The cities over which it fell now exhibit a fall of 930 feet, greater than any river waterfall on earth. We dredged about 100 feet of the city within 100 miles of the City Hall and found a rich deep life.

Several bright, lighted fish were hauled up to the surface, indicating that a white light district exists at the bottom of the extract waterfalls.

A Scientific Production

Making Tennis Balls Is a Slow Process

The tennis ball of today is a scientific production, the subtleties of which require 10 years to perfect it.

A tennis ball has not only to pass tests of weight and size, but a bounce test

and a durability test.

The tennis ball is made of two

separate halves, and then has to be

valenzized, or "cured," to a point of

accuracy which, measured by time, is

but a second.

The two halves are then joined

together in the inflation process.

The inflation is an operation

demanding great skill.

The cover or a stitched ball is

of course a glove, and then sewn.

No secret about that!

Fighting Disease With Disease

Treatment Is Said To Have Been Successfully Tried

That paralysis may be cured by inflicting the sufferer with malaria fever was the belief expressed at a recent meeting in which one disease is made to cure another, is said to have been tried with success.

Blood taken from a malaria patient is injected into the body of another patient who has attacks of fever. After eight or nine doses of this, the patient is given quinine to kill the malaria germs which killed the parasite.

Popular Mechanics

Lands Freed From

Up to 10,000 acres of Kootenay flats land will be freed of cost to any person who will use the land to grow vegetables, which will be sold to the government at a price which will be decided to dispose of at a price that will assure the acreage reclaimed being put under crop.

This is the announcement

of Hon. T. D. Pattullo, minister of lands for British Columbia.

A critic is a man who sits on the fence and howls as the world isn't as wise as he feels.

In the forested hills of Muskox land in the forested valley of Elkwater, the second nearest known land to the North Pole.

A species of small has been known to live without food for a year and a half.

New Continent Is Rising In Pacific

Land Is Being Built Up Near Hawaiian Islands

Edwin Fairfax Naufty, geophysicist of New York, who has made a study of the oceanography of the seven seas, writes the following remarkable statement:

"Large waves on the bottom of the world, caused, perhaps, by a great wave, have built up the Pacific Ocean, from the Japanese Archipelago, across Alaska and the Aleutian Islands, breaking at the foot of the mountains, and now the Hawaiian Archipelago, have built up the shoulder shoals surrounding the Hawaiian Islands and seem now to be creating new land on the neckings of the various islands and shoals of the Hawaiian.

"The expected upturn of land, which is likely to come in the future, will present as a gift of nature to the United States, as long as the sun shines." Cal, to Queen Charlotte Sound, British Columbia, and as wide as California, or as long as the tip of Florida or the Gulf of Mexico. It would be a natural holding for a phosphate and trade base and would grow enough sugar, rubber, copra, coffee and tea to render the United States independent of other present sources of these articles.

Only Attempted One

How did you get on at your arithmetic examination?"

"I did not, father."

"How many sums did you have wrong?"

"Only one."

"How many were there?"

"Twelve."

"Fine. And the other eleven were all right?"

"Oh, no. I didn't do them."

In the forested hills of Muskox land in the forested valley of Elkwater, the second nearest known land to the North Pole.

A species of small has been known to live without food for a year and a half.

Influence of the sun's rays upon perception was the "apparition" which was invented by Francis Galton for his personal comfort in ceiling over people's heads at the theatre and in crowds.

Don't ever borrow money from him if he's a shark. He wants 50 per cent in winter and 60 in summer."

Why more in summer?"

"Because the days are longer."

The English Of It

This is probably why the English language is so hard for foreigners to learn.

"I've lost the links," said the soiled shirt.

"I've lost the links," said the soiled shirt, as he wandered aimlessly through the woods.

"I've lost the links," said the hunter, as he saw the tracks around his trap.

In Cipher

Candler, author of "The Square Geometrician," checks: "Your pardon, sir, but what's your name?"

"Say, what's the idea? Can't you read? Can't you sign my signature on the check?"

"Sure I do. That's what made me curious."

Natural Resources Bulletin

Canada Has Need For Patriotic Ideas Regarding This Dominion

The natural resources intelligence service of the department of the interior at Ottawa, says:

With the opening of the autumn term of the schools the pupils will be again exposed to the world. What the study shall be left to the discretion of the after-noon of these coming Canadian men and women will depend largely upon the teachers. A set curriculum is established by the provincial educational authorities which must be followed, but these regulations cannot and are not intended to eliminate individuality entirely. We can all look back upon our school days with pleasure, primary or secondary, and pick up some good points.

It is the responsibility of the teacher to make use of his knowledge and experience to help him to meet the situation to the best advantage.

A knowledge of the natural resources of Canada is a valuable asset to the teacher, reaching the home through the paper especially in the case of the teacher who is a naturalist, botanist, entomologist, mineralogist, etc., becomes steadily lower, and when the temperature is 90 degrees in the shade mistakes increase to 60 per cent. With these figures to impress him on an employer that a day off is safer all round in the hot weather.

A knowledge of the natural resources was the "apparition" which was invented by Francis Galton for his personal comfort in ceiling over people's heads at the theatre and in crowds.

The influence of the sun's rays upon perception was the "apparition" which was invented by Francis Galton for his personal comfort in ceiling over people's heads at the theatre and in crowds.

From experience gathered up by a famous psychologist, he proved that mental efficiency is lowered, and more mistakes are made, when the temperature rises above 70 degrees. As a result, the teacher, reaching the home through the paper especially in the case of the teacher who is a naturalist, botanist, entomologist, mineralogist, etc., becomes steadily lower, and when the temperature is 90 degrees in the shade mistakes increase to 60 per cent. With these figures to impress him on an employer that a day off is safer all round in the hot weather.

The natural resources intelligence service of the department of the interior will gladly forward to teachers maps and literature on Canada that may be of value in promoting a true Canadian spirit among their classes.

Cannibals Collect For Profound Applause

Organized Hand Clappers Decide

Publix Says Vienna Just Right

Organized applause constitutes a depiction of the public, in the opinion of a Vienna judge. Persons engaged to do the hand clapping and to voice their opinions in other ways cannot easily compete in other ways cannot easily compete in other ways.

The case arose from a dispute between Dr. Stefan, composer of a comic opera, entitled "Aglit," and the leader of a choral society, who claimed that the performance of "Aglit" was given.

The leader claimed that the composer had agreed to employ the services of the choral, and that the choral was to receive a monthly service with 200 crowns.

The judge decided to hear just what the arrangement between the two men was, and rendered judgment against the leader, on the grounds that the services of the choral were not until 1892 that the match emerged from the laboratory and was placed on the market—Indispensable News.

History of the Match

Was First Introduced in England 100 Years Ago

The match recently had its 100th birthday, having been introduced in 1892 by John Walker, an Englishman, who conceived the idea of setting matches alight by passing a box.

The safety match, called "Wedgwood," did not appear until the year 1892. This was the first match which could be lit only when struck on the box.

The use of the match, however, antedates Walker's invention.

As early as 1869, Godfrey Hawkesworth was using phosphorus to ignite little wooden sticks dipped in sulphur. Various experiments were made by other inventors, but the match did not appear until 1892 that the match emerged from the laboratory and was placed on the market—Indispensable News.

The English Of It

This is probably why the English language is so hard for foreigners to learn.

"I've lost the links," said the soiled shirt.

"I've lost the links," said the soiled shirt, as he wandered aimlessly through the woods.

"I've lost the links," said the hunter, as he saw the tracks around his trap.

Teachers to Inculcate Proper Ideas Regarding This Dominion

The natural resources intelligence service of the department of the interior at Ottawa, says:

With the opening of the autumn term of the schools the pupils will be again exposed to the world. What the study shall be left to the discretion of the after-noon of these coming Canadian men and women will depend largely upon the teachers. French River Has Record Fishing Season

(Upper) Five Finger Rapids, French River. (Lower) Netting the Fishers at French River. (Inset) The crooks afloat in the rapids at the angle starting at French River Borealis Camp who catch the largest black bass during the season.

The French River district in North-eastern Ontario where the Canadian Pacific Railway operates a bungalow camp is reported to be having the record season for fishing it has ever experienced.

For excellence of sport and size of fish the present season is unequalled.

The Dr. S. Stark park of six people has a grand record catch of 49 bass in one day, while the next day

has in one day, while the

Want Canadian Governor-General
Vancouver Native Sons of Canada
Favor Canadian for Post
The Vancouver Assembly, Native Sons of Canada, went on record as favoring a Canadian for the post of governor-general.
Sir James Atkinson, Sir Robert Borden, Sir William Mulock, Hon. Richard Lemire, Sir Arthur Currie, Sir Louis St. Laurent, and Rt. Hon. W. S. Fielding, were suggested as suitable for the position.

BAKEE, SON OF KAZAN

by
James Oliver Curwood

A LOVE EPIC OF THE FAR NORTH

Copyright, 1917, by Doubleday, Page & Co.
"BAKEE, SON OF KAZAN," a Vitagraph Picture, With Wolf, the War Dog, is an Adaptation of This Story

SYNOPSIS

Baree, the young wolf-dog, wandered in the wilderness, came upon a colony of men, became their friend, and with them, their leader, but the little animals ran away from him, leaving him alone. Baree, who was attracted by the moaning of the women, followed the cry, and at a fox, but thrilled more by the cry, which was the call of his own, summoned him to the chase, the hunt, the wild orgy of born teeth and running blood.

CHAPTER VII.—Continued.

Fox, with a fierce growl, watched him while he snatched his meat out of the pool. When at last he stopped, there were twenty or thirty fish among the stones, some of them dead and others still hopping. From where he stood, Baree could see between the two rocks, Baree had heard the crunching of flesh and bones as the bear devoured his dinner. It sounded good, and the fresh smell of bacon mixed with a craving that had never been roused by anything or even participation.

Twenty seconds after the last of Wakaway had disappeared in a turn of the creek, Baree was under the bushes again. He drew out a fish that was still alive. He ate the white of it, and it was delicious.

Baree now found that Wakaway had solved the same problem for him, and the old bear did not return to the big pond, nor the next. The big bear was busily fishing up and down the creek, and day after day Baree continued his feasts.

Life, though continued to be exceedingly pleasant. And then came the break—the change that was destined to mean as much for Baree as that other day, long ago, had meant for Kazan, his father, when he killed the man-brute in the edge of the wilderness.

This change came on the day when, in trotting around a great rock near the stream, Baree saw his human face to face with a certain tattered and Nepesee, the star-eyed girl who had shot him in the edge of the clearing. It was Nepesee whom he saw first. If it had been Pierre, he would have turned and run, but he saw the blood of his foe bear was too strange, trembling within him. Was it like this that the first woman had looked to Kazan?

Baree, however, Nepesee was not more than twenty feet from him. She sat on a rock, full in the early morning sun, and was brushing out her wonderful hair. Her lips parted, her eyes shone in an instant like stars. One hand remained poised, weighed

COULD NOT SLEEP NIGHTS

Pains and Headaches Relieved by Taking Lydia E. Pinkham's Vegetable Compound

Edmonton, Ontario.—"I was weak and irregular, with pains and headaches, and could not sleep nights. I learned about Lydia E. Pinkham's Vegetable Compound, and read the article in the medical newspapers and tried it because I wanted to get rid of my pains and results from it as I feel a lot stronger and am not troubled with such bad headache as before. I sleep well and regular. I am gaining in weight all the time and I tell my friends what好处 of Lydia E. Pinkham's Vegetable Compound. I will send you my letter as a help to others." Mrs. MARY RACHO, Box 12, Dublin, Ontario.

Halifax Nurse Recommends

Halifax, N. S.—"I am a maternity nurse and have recommended Lydia E. Pinkham's Vegetable Compound to many women who were childless, and could not have a good time. I am English by birth, and when I was a girl, and he told me of Lydia E. Pinkham who, in England, was a great success. I wrote to him and asked for a copy of your little book on women's ailments. I have one which I keep in my pocket. I receive many letters from any woman asking about the Vegetable Compound."—Mrs. S. M. CURRAN, 13 Union Street, Halifax, Nova Scotia.

with the jet treas. She recognized him. She saw the white star his breast and the white tip on his ear, and with a smile she whispered "Ichi moushi!"—"The dog-pup?" It was, the wild dog who had shot—and that had died!

The evening before Pierrot and Nepesee had built a shelter of balsam and pine branches, and a small while plot of sand Pierrot was kneeling over a fire preparing breakfast while the Willow arranged her hair, and said to him, "Hurry, we must go and save Baree. In the Indian spell was broken. Baree saw the man-beast as his feet. Like a shot he was gone.

Scarcely swifter was he than Nepesee.

"Nepesee was not more than twenty feet from him."

"Pepesher vous, mon pere?" she cried. "Is this the dog-pup? Quick!" In the flames of the fire she had sped after Baree like the wind. Pierrot followed, and in going he caught up his rifle. It was difficult for him to catch up with the Willow. She ran with great speed, like a deer, caressed, leaped scarcely touching the sand as she ran up the long bar. It was wonderful to see the like swiftness of her, and that wonderful heart beat. She was like a deer.

But Wakaway kept straight ahead in the meadow.

Claresholm Local News

Nazarene Church Announcements

Friday, 8 p.m., Mr. Philip Hardling, speaker. Mrs. Geo. Rimrose will sing. Sunday, 8-30 p.m., the Prayer Band will meet at the church.

Sunday, 10:30 a.m. A special series of practical talks will be given each Sunday a.m. throughout this month. Next Sunday's will be "What would do if I were to see the progress that this church is making?"

3 p.m., meeting at Greenbank. 7:30 p.m., a big evangelistic meeting subject, "Until He meets us or Christ looking for a lost sinner."

Next Tuesday night will start the series of a number of special meetings that will be held this fall. Rev. A. H. Egglestone of Lethbridge will be the speaker.

A friendly church with a friendly welcome to all.

Our motto "Back to the Bible."

BUSINESS LOCALS

For Sale—Good quality Bromeg seed—J. A. Brown, Phone 1700, Claresholm.

For Sale—Cattle—A good McCay herd range. Miss S. H. Price. Inquire at Geo. Todd's.

For Sale—A lot of good爵士 cattle—Sale at 10% interest. J. E. Brooker, Shyler Street Bakery.

For Sale—Complete household

furniture for five rooms, including gas stoves, rings, etc. practically new.—E. W. White.

For Sale—Good nine room house, on 10 acre lot; good well; reasonable. Also improved half section, 8 miles east, reasonable.—J. Elverum.

For Sale—Any one wanting two good Hereford bulls, in good supply V. H. Pendol, phone 16-13-27. Will sell cattle for cash or will trade for other cattle.

For Sale Cheap—House and five acres tract close in, east of Pioneer elevator, all in cultivation; also Gray Dot touring car. Cash or easy terms. For further information write to W. G. McElroy, Raymond, Washington, Box 924.
